All of your mental health and physical health care services in one location?

Yes.

We've gathered a team of primary care providers, psychiatrists, therapists, nurses, medical assistants, case managers and peer support specialists to work as a single team in one location.

Since 1970, CODAC has been one of the most respected, community-based providers of specialty care for mental illness, addiction and trauma. With our added focus on primary care and wellness, we now provide the most complete health care options available.

Schedule your first primary care appointment through your case manager, psychiatrist or peer support specialist. Call 520-327-4505 or visit CODAC.org/primarycare

The result:

Highly personalized care for the whole you.

Our new *integrated* health care approach combines primary health care with the mental health, addiction and trauma services CODAC is known for.

Alongside our treatment for substance abuse, anxiety, depression and other mental illnesses, we can now help you with common illnesses and injuries, physicals and screenings, and chronic conditions like diabetes and high blood pressure.

We understand the needs of individuals with mental health and addiction disorders. We know that when both mental and physical health care is all in one "health care home", our members will have better results, including less depression, better quality of life, lower stress, and fewer emergency room visits and hospital stays. By focusing on both, you can have them most complete care available, all in one easy location.

CODAC, your home for health care.
